

CONTENTS

Foreword.....	5
Contents.....	8
1. Alea iacta est.....	9
Experiments, events.....	9
Random and deterministic events.....	9
Elementary and compound events.....	9
Certain and impossible events.....	10
Opposite events.....	10
Sum of the events.....	11
Product of the events.....	12
Involved events.....	12
Difference of the events.....	13
Compound events.....	14
Properties of operations between events.....	15
Space of elementary events.....	16
1st simulation in Excel.....	16
Combinatorics.....	18
Binomial coefficients.....	22
2. ... but on which side it will come to rest?.....	23
Random events.....	23
2nd simulation in Excel.....	23
3rd simulation in Excel.....	26
Absolute and relative frequencies.....	28
Law of big numbers.....	30
The probability of an event.....	30
Probability properties.....	31
Conditional probability.....	33
Bayes' theorem and that of total probability.....	34
Independent and dependent events.....	35
3. Analysis of experimental data.....	37
Random variable.....	37
Frequency histogram.....	37
Continuation of the 2nd simulation in Excel.....	40
Continuation of the 3rd simulation in Excel.....	42

Probability density function and cumulative distribution function.....	43
Properties of the probability density and of the cumulative distribution functions	43
Characteristics of the probability density function.....	46
Mean (expected) value.....	47
Variance	48
Coefficient of variation	50
Skewness	50
Curtosis.....	51
Quantiles.....	51
Fractiles.....	52
The most probable value: the mode	55
4. Most important distributions	56
4.1. The uniform distribution.....	56
Generating uniformly distributed random values	57
4.2. The binomial distribution	58
Binomial distribution in Excel.....	60
The Bernoulli distribution.....	63
4.3. The normal distribution.....	63
Standard normal distribution.....	66
The normal distribution in Excel.....	67
Generating normally distributed random values.....	69
4.4. The lognormal distribution	69
Generating lognormal distribution based on normal one.....	71
Lognormal distribution in Excel.....	71
4.5. The hypergeometric distribution.....	72
Hypergeometric distribution in Excel.....	73
4.6. The Poisson distribution	75
Poisson distribution in Excel.....	77
4.7. The exponential distribution	78
Exponential distribution in Excel.....	79
4.8. The geometric distribution.....	79
Geometric distribution in Excel	81
4.9. The distribution of the extreme values	82
The Gumbel distribution.....	83
Negative Gumbel distribution	84
The Gumbel distribution in Excel.....	84

The Fréchet distribution.....	86
The Fréchet distribution in Excel	88
The Weibull distribution	89
The Weibull distribution in Excel.....	90
5. Multivariate distributions.....	93
Probability space	93
Joint probability density function and joint cumulative distribution function.....	93
Example from structure's design.....	96
The case of dependent arguments	99
Covariance and correlation	105
Rank correlation coefficient.....	106
Spearman rank correlation	106
Spearman rank correlation in Excel	107
Kendall rank correlation.....	108
Functions of random variables	109
Example: the Rayleigh-distribution.....	114
Central limit theorem.....	115
6. Statistical processing of experimental data	117
Statistical population	118
Sample, sampling with and without replacement.....	118
Data processing.....	119
Sample mean and empirical variance	120
Confidence intervals.....	124
Confidence interval of normally distributed population with known variance.....	124
Confidence interval of normally distributed population with unknown variance	127
Confidence intervals when the distribution is unknown	132
Statistical tests.....	132
The u test (or z test)	132
The t test.....	134
The bivariate u test.....	135
The bivariate t test.....	137
The F test.....	138
Concordance test	139
Eliminating blunders.....	141

7. Stochastic processes.....	143
Markov chains	143
Markov processes	147
Markov chains with continuous state space.....	148
Statistical characteristics of stochastic processes	149
Autocovariance and autocorrelation.....	150
Stationary and ergodic processes.....	151
Spectral density	151
Simulation of a normally distributed stochastic process.....	155
References	166
English-Hungarian correspondence of the Excel functions	167
ABSTRACT	168
CONTENTS.....	170
ZUSAMMENFASSUNG	174
INHALTSVERZEICHNIS	176
REZUMAT.....	180
CUPRINS	182
